Subject: Cabo Rojo update
Date: Thursday, January 09, 2014 12:18:52 PM

Buenas tardes Denise,

Just to keep you updated, we are just about set for the FLUTe multiport well installations starting on Monday, January 13. José Reyes from my office is at the site today to receive the equipment shipped by FLUTe that they need next week. Frances will be at the site next week to oversee the FLUTe installations. After the FLUTes are installed, we have arranged for the surveyor to come to the site and survey all of the monitoring wells. Frances is coordinating notification of the various property owners and town entities about the work we will be doing next week and possibly into the following week, plus sampling in early February.

I have already submitted the CLP/DESA lab request for the one round of monitoring well sampling. I assumed the sampling would start on February 3. I included 1,4-dioxane to be analyzed as an SVOC in the request.

Enjoy el fin de semana and stay warm!

Susan
